# Digital Literacy

**Name: Anshuman Singh**
**Reg No:** 25BAI10452
**Branch:** B.Tech **Year:** 1st Year
**Course Code:** CSE0001

# Introduction

In today's digital world, technology has become an essential part of our daily lives. From attending online classes to connecting with people through social media, students are constantly using digital platforms. However, simply using technology is not enough; it is important to understand how to use it effectively, safely, and responsibly. This is where digital literacy plays a crucial role.

This project was given with the aim of developing our understanding of digital tools and improving our online behavior as responsible digital citizens. As a Student Digital Ambassador, the objective was not only to learn these skills but also to spread awareness among peers. The project includes different tasks such as creating an infographic, building a digital portfolio, exploring coding platforms, understanding email etiquette, and learning about cybercrime awareness.

Each task helped in developing a specific skill. For example, creating a digital portfolio helped in building a professional online presence, while exploring platforms like GitHub and coding websites improved technical knowledge. Similarly, drafting professional emails taught the importance of clear and respectful communication in a formal environment.

One of the most important parts of this project was understanding cyber safety and the risks present in the digital world. It helped in realizing how easily people can become victims of cybercrime if they are not careful.

Overall, this project provided a practical learning experience and helped in improving both technical and communication skills. It also encouraged responsible use of digital platforms, which is very important for students in today's time.

## Task 1: Digital Literacy Infographic

For this task, I created a digital literacy infographic using Canva, which is an easy-to-use online design tool. The aim of my infographic was to spread awareness among students about the importance of digital literacy in today's world. In my design, I included key topics such as the meaning of digital literacy, safe internet practices, and the importance of maintaining a professional online presence.

The infographic visually explains how students can use digital tools effectively for learning, communication, and personal growth. I also highlighted basic safety tips like protecting personal information, using strong passwords, and being cautious while interacting online. The use of icons, colors, and simple text made the content more engaging and easy to understand.

While creating this infographic, one challenge I faced was organizing the information in a limited space without making it look crowded. However, this task helped me improve my creativity and taught me how to present information in a clear and visually appealing way.

Overall, this activity was interesting and helped me understand how to communicate important digital concepts in a simple and effective manner.

## Task 2: Digital Portfolio

In this task, I created my digital portfolio using platforms like LinkedIn, Kaggle, and ResearchGate. These platforms help students build a professional identity and showcase their skills and interests. LinkedIn is mainly used for networking and connecting with professionals, Kaggle is useful for practicing data science and improving analytical skills, and ResearchGate is designed for sharing research work and connecting with the academic community.

While setting up my profiles, I added my basic academic details such as my name, branch, and current degree. On LinkedIn, I completed my education section and created a simple professional profile. On Kaggle, I explored datasets and competitions, while on ResearchGate, I understood how research-based platforms work.

This task helped me realize the importance of having an online presence from the beginning of my college journey. Over the next four years, I plan to regularly update these platforms by adding my projects, skills, and achievements. I will also try to learn new things through Kaggle and connect with knowledgeable people on LinkedIn and ResearchGate.

Overall, this activity was very helpful in building a strong foundation for my digital portfolio and future career growth.

## Task 3: Coding & Collaboration Platforms

In this task, I explored coding practice platforms and collaboration tools that are useful for students. For the coding part, I used HackerRank, where I completed a beginner-level problem. This helped me understand basic programming concepts and improve my logical thinking. Solving even a simple problem gave me confidence to continue practicing coding regularly.

For the collaboration part, I created a Google Form as a Digital Literacy Awareness Quiz. The form included five questions, such as multiple-choice and short answer types, to test basic knowledge about digital literacy. I also viewed the responses in Google Sheets, which helped me understand how data is collected and analyzed in real time.

This task helped me learn how different platforms can support both individual learning and teamwork. Coding platforms help in improving problem-solving skills, while tools like Google Forms make it easy to collect information and collaborate with others.

In the future, I plan to continue practicing coding on platforms like HackerRank and use collaboration tools for academic projects, surveys, and group activities.

## Task 4: Email Etiquette & Communication

In this task, I learned how to write professional emails and understood the importance of proper communication in a formal environment. I created two email drafts — one for requesting an assignment deadline extension and another for applying for a summer internship. This helped me understand how to structure an email with a clear subject line, polite greeting, well-organized body, and a proper closing.

I also created a checklist of social media do's and don'ts, which highlighted the importance of responsible online behavior. While working on this task, I realized that poor communication, such as using informal language or unclear messages, can create misunderstandings and leave a negative impression.

This task improved my communication skills and made me more confident in writing formal emails. I will make sure to follow these rules in my academic and professional communication in the future.

## Task 5: Cybercrime Awareness

In this task, I worked as a Digital Ambassador to spread awareness about cybercrime and promote safe online practices among students. I selected **phishing** as the topic for my case study because it is one of the most common and dangerous cyber threats faced by users today.

Phishing is a type of cybercrime where attackers trick individuals into sharing sensitive information such as passwords, OTPs, or banking details by pretending to be a trusted source. For this task, I created a detailed case study explaining how phishing attacks typically occur, including the methods used by scammers, the type of people targeted, and the possible consequences such as financial loss and data theft.

In addition, I developed a “Stay Safe Online” prevention checklist specifically designed for college students. This checklist includes practical and easy-to-follow safety tips, with special focus on financial and UPI-related precautions. I also included official reporting channels such as the National Cyber Crime Portal and helpline number 1930 to encourage quick action in case of fraud.

Through this task, I gained a deeper understanding of cyber threats and realized the importance of being cautious while using digital platforms. This activity helped me become more responsible and aware as a digital user.

## Conclusion

Overall, this project was a great learning experience that helped me understand the importance of digital literacy in today's world. Through different tasks, I was able to explore various tools and platforms that are useful for students in academics as well as future careers. I learned how to create a professional online presence, communicate effectively through emails, and stay safe from cyber threats.

This project also improved my creativity, technical skills, and awareness about responsible digital behavior. It encouraged me to use digital platforms in a more productive and safe manner. I will continue to apply these learnings in my daily life and work on improving my digital skills further in the future.
